

- Sick of having tech issues?
- Tired of your systems lacking performance?
- Want to know if tech could better enable your business to succeed?

Now's the time to think about getting a totally unbiased, obligation free tech audit from us. We'll tell you the in's and out's of your current systems, and provide you with recommendations on how your company can achieve optimal performing technology.

- ✓ network infrastructure
- ✓ line of business applications
- ✓ backup & business continuity
- ✓ cyber security

1. Discovery

Firstly, we try to understand your business, what you're trying to achieve, and how tech can help you reach your goals. In order to do this, our business experts connect with you and your people to uncover your 'pain' and your ideas for improving technology. We then look into your tech, and this is where we take a closer look at your environment and document everything we find. From these means, we are able to have a strong understanding of how we can fix your problems, and how tech can better support your business moving forward.

2. Analysis

During this stage, we head back to our office and analyse everything found in the discovery period. We delve into the data pulled from our software tools, as well as study what our tech & business experts found. Our priority here is to uncover the connections between the pain you are experiencing, and the faults within your network - because let's face it, where there is pain involved on the users side, there are always improvements that can be made on the technical side. We also find ways for technology to drive your business in this stage.

3. Reporting

The report we present to you is made up of two parts. Firstly, a summary of what we discovered. This will give you a closer look into the back-workings of your current networks and systems. We'll give you an insight into how your people find the ease of use of your tech, and how well your systems are performing in terms of backups, security and more. This will give you a holistic view of your business tech: what's working, what's not, and how you can to achieve optimal results. The second area of this report is a recommendations list. This list is the key to unlocking the ways your tech could better support your business and help you succeed.
